Making a keyboard with RGB light on a website

27 Oct 2024 | Design, CSS Grid

This is a custom-built virtual keyboard with RGB lighting effects, designed to simulate the vibrant lighting found in physical gaming keyboards. The project is created using HTML, CSS, and JavaScript, with special focus on interactive animations and responsive design.

Weekly plan

12 Oct 2024 | CSS, HTML

This project is a simple and elegant web-based weekly planner designed to help users organize their tasks efficiently. It was built using HTML and CSS, focusing on a clean and responsive design. The layout divides the week into clear sections, making it easy to add or view tasks for each day.

Featured works

Keyboard

2024   CSS Grid

This is a custom-built virtual keyboard with RGB lighting effects, designed to simulate the vibrant lighting found in physical gaming keyboards. The project is created using HTML, CSS, and JavaScript, with special focus on interactive animations and responsive design.

Visual Novel "Balance between Harmony and Chaos

2024   Python

"Balance Between Harmony and Chaos" is a story-driven visual novel that explores the delicate equilibrium between two opposing forces: harmony and chaos. Set in a beautifully crafted world, players are immersed in a tale of moral dilemmas, emotional conflicts, and the consequences of their decisions.
